FRI 12.11.2021
14-15:30 HRS S.T.
CORNELIUS SCHUBERT
(TU-DORTMUND)
CODING DATA IN
SOFTWARE AND IN STS

LECTURES

WINTER SEMESTER 21/22

THU 09.12.2021
16-17:30 HRS S.T.
RACHEL DOUGLAS-JONES
(ITU-COPENHAGEN)
GONE BUT NOT
FORGOTTEN: AUDITING
DATA ERASURE

FRI 28.01.2022
14-15:30 HRS S.T.
SEBASTIAN MERKEL
(RUHR-UNI-BOCHUM)
DIGITAL HEALTH
COMPETENCE

FRI 11.02.2022
14-15:30 HRS S.T.
MARKUS RUDOLFI
(GOETHE-UNIVERSITÄT
FRANKFURT)
STRUGGLING FOR WORDS:
PLANTS, DATA, AND THE
IRON CURTAIN

All lectures will be both **on-site**
and **on-line**.

RUSTlab Lectures WS21/22: Fridays 14:00 -15:30 hrs
(and one Thursday)

Data Concepts: Key terms in experimentalist data studies

Experimentalist Data Studies are explorations of how to engage proactively with more-than-digital data for the purpose of collective intervention across differences into current public concerns. This embraces both practical arrangements and rearrangements of data, data tools, data infrastructures and data visualisations as well as of concepts and imaginaries. Experimentalist Data Studies are participatory, both driven by and living off of the frictions generated when differences come together: different organisations, different disciplines, different practises, different discourses, etc. It feels at home in Science & Technology Studies engagements with the digital, and vocabularies in the vicinity of Actor-Network Theory and American Pragmatism mobilize the understanding and development of Experimentalist Data Studies.

Over the past year, the RUSTlab lectures ([SoSe21](#), [WS20/21](#)) have engaged with digital data in different facets: We have explored counter-narratives with data ([Delgado](#); [Schütz/Su](#)), citizen science ([Østerlund](#)) and museum data collections as object of heterogeneous stakeholder collaboration ([Luther](#)). We attempted to localize and situate data to know what it takes to extract them ([Eggel](#); [Galanova](#); [Mewes](#)), archive them, index them, trace and connect them ([Hall](#)), how data infrastructures ([Rothöhler](#), [Sprenger & Sørensen](#)) and software maintenance work in practice ([Ojala](#)), and with the methods for reflecting data methods ([Lippert/Mewes](#)). We have attended to the ontologies and topologies of data: "what are data?", we asked to broaden our understanding of what data can be(come), and "where" are they locally, specifically, physically ([Bogusz/Marres](#)).

In the meantime, the lab has engaged in developing its own capacities further by employing digital methods in different contexts and with different goals, e.g., [teaching](#), research (see recent [podcast](#) and [youtube video](#) by lab member Laura Kocksch), [public engagement](#).

This term we go back to the concepts that find digital data to be occasions for experimentalist intervention. We examine experiments with data in various contexts, viewing them as situations that prolong, enrich, contest, provoke and facilitate "encounters of difference" (cf. Bogusz 2018). Such experiments are capable of allowing participation in knowledge production, but also allow to widen the ethnographic process. We argue, it is in experiments that ethnographic data research reaches "critical proximity" with data and digital technologies (Latour 2004, Birkbak et al. 2015).

This term, we will explore further engagements with data that inspire Experimentalist Data Studies: "On Coding Data in Software and STS" (Cornelius Schubert), on "Gone but not Forgotten: Auditing Data Erasure" (Rachel Douglas-Jones), on "Digital Health Competencies" (Sebastian Merkel), and on "Struggling for words: Plants, Data and the Iron Curtain" (Markus Rudolphi). We invite speakers and discussants, friends and visitors of the RUSTlab to join us in discussing some of these and other questions in our RUSTlab Lectures over the winter term 21/22. Our discussions always rely on original empirical research, and will discuss data as they figure in the fields of.

**The meetings will be on-site in the Universitätstr. 104, Room 201
and on-line: <https://tinyurl.com/RUSTlab>**
